Health Habit and Reproductive Drug Options

There's no doubt that prescription drugs significantly improve our health and way of life. However, new technologies come at significant costs, and rising prescription costs have been a concern for many of our customers.

Health, Habit & Reproductive Drugs

To help manage your company's prescription drug costs while maintaining comprehensive prescription drug benefits for your employees, we offer the option of excluding coverage for health, habit and reproductive drugs (sometimes referred to as "lifestyle drugs").

What are health habit and reproductive drugs?

These drugs do not treat acute or chronic illnesses. They treat sexual impotency or infertility, or help in weight loss. The prescriptions are usually expensive and many are not available in a generic form.

PD-XED-MPH

A prescription drug rider that amends your prescription drug certificate to exclude coverage for all health, habit and reproductive drugs. The list of drugs is continually updated as new therapies are approved by the FDA.

For more information, please call your Blue Cross Blue Shield of Michigan or Blue Care Network sales consultant or Blues-contracted agent.
